

Omar Tulashvili

Infrastructure & Product Security Engineer · Russia, UTC+3

headgear@proton.me · github.com/tulashvili · LinkedIn

Profile

Infrastructure Security Engineer with nearly three years at Dats.team and hands-on Linux/SysOps experience across 250+ servers. I improve vulnerability remediation with Nessus and Jira, tune WAF controls, and automate security workflows using Python, Bash, Vault, and GitLab CI. Reduced privileged access by 82% (from 40 users to 7).

Experience

Dats.team · Nov 2023 — present

Security Engineer · May 2026 — present

- Redesigned Nessus remediation: grouped related findings into Jira tasks, then automatically updated priorities and task data.
- Perimeter security: WAF rules, false-positive analysis, safe rollout from monitoring to blocking; configuration and access reviews.
- Migrated CI authentication from a static Vault token to GitLab JWT, removing a long-lived service credential.
- Connected DefectDojo findings and Jira remediation status to a vulnerability dashboard, giving teams one view of open fixes.

Linux Engineer / SysOps L3 · Nov 2023 — Apr 2026

- Operated infrastructure with more than 250 servers: Linux, web services, databases, monitoring, backups, and incident response.
- Repurposed two Linux servers for a new service within 3 days; automated configuration with Ansible and SaltStack.
- Reduced root-level access by 82.5% (from 40 users to 7) and removed a service password exposed in process listings.
- Provisioned more than 20 servers, set up monitoring and alerts, and moved credentials into Vault.
- Restored production domain availability within 3 hours; completed production upgrades and infrastructure migrations without downtime.

Secstant · DevOps Intern · Jun–Nov 2023

Supported Linux and CI/CD environments; automated routine tasks with Shell and Python.

Equio · Second-line Support Specialist · May 2022–Nov 2023

Investigated support incidents using logs, tested fixes, and documented repeatable resolutions.

Powernet · Technical Support Specialist · Feb 2019–Feb 2022

Diagnosed network and customer equipment issues and escalated unresolved cases to engineering teams.
